HOW DOES eBONDS™ WORK?

Jail Network

JMS
Inmate booking, offense, and bond data

eBONDS Network
Dedicated CJIS-Compliant, Azure Government Network (US Located)

eBONDS Web Service
Secure document & data storage

Insurance/Surety Company
Bond Agent Powers of Attorney

Electronic Powers Portal

Secured Certified Bond Document

Bond Document

**Bail Bond Company**

THE PROCESS

Once a cosigner completes the bond application with a local bondsman, the eBONDS process begins. It starts with a Bail Bond Agent logging into the eBONDS portal — which is integrated with the jail's JMS system — to create a bond. Once submitted, a Jailer reviews and certifies the bond for book out. The inmate signs the bond electronically and can then be released. Copies of the secure, signed bond documents are immediately available for the inmate's jail record and the Bail Bond Agent.

WE WANT TO SET THE RECORD STRAIGHT

Here are the facts about eBONDS™. What it is and what it is NOT. No gimmicks, no misconceptions, and no more rumor mill.

WHAT IT IS

✅ Owned by a 30-year **independent** and **private** public safety software company located in Tyler, TX

✅ Implemented based on **local** decisions by **local** officials, bondsmen, and jail administration

✅ Facilitates electronic bond and electronic power transactions between bond companies and jails

✅ A secure, web-based, CJIS-compliant solution that expedites the bonding process

WHAT IT IS NOT

❌ NOT affiliated with any insurance or surety company, government entity, or other software solution

❌ NOT accessed on a state or national level — only locally approved bondsmen have access

❌ NOT a replacement for any local bondsman or any other bond company management software

❌ NOT dependent on the most easily compromised forms of communication (email, fax, paper)
